

The heart of the system - the triangular hanging bar & hard wearing mylar self adhesive strips with triangular shaped holes. Snap on, Snap off.

RACKING SYSTEM

The most economical and efficient way to store and archive large quantities of outsize documents.

Racking can be customised to individual needs. The system can be fitted into any type of racking - metal or wood. Ideal system is in bays approx 600mm wide. The long side of the document to be hung decides the hanging depth in each bay. The height of the bays is optional. We either supply the triangular hanging bars to fit into the users own racking or supply the racking itself on specific quote.

MAJOR ADVANTAGES OF THE RACKING SYSTEM

- Will hang documents several layers high dependent upon their length
- Can hang extra long sheets by attaching a mylar strip at each end of the sheet. See middle bay in photograph.
- Saves 80% or more in floor storage space
- Can be extended when necessary
- Very cost effective
- Hangs individual documents or bags containing many documents
- Easily accessible - snap on snap off

Example of capacity

One 3 Bay rack measuring 2700mm (106 inch) high, 3000mm (116 inch) wide, 620mm (24 inch) deep
Will comfortably hold 7000 sheets per level so that in 3000mm x 650mm floor space 14000 charts, maps, plans, artworks can be stored on 2 levels. More on 3 levels if documents are smaller.

NOTE: If filing documents with hanging edge over 600mm long then 5 triangular bars needed. For documents with hanging edge over 900mm then extra bars needed at 170mm centre spacing & mylar strips should be purchased in 100 metre rolls & cut to length.
